HARSH JADAV

Ahmedabad, India | +91 84019 60169 | **bakasakuta33@gmail.com** | **harshjadav.com** | **github.com/harshh-0304** | **linkedin.com/in/harshh33**

TECHNICAL SKILLS

Languages:	Python, TypeScript, JavaScript (ES6+), SQL, C#, PHP, Bash
Frameworks & Backend:	Django, Django REST Framework, Celery, NestJS, Node.js, Express, React 19, Next.js 16, Vite, ASP.NET MVC
Cloud, DevOps & Edge:	Cloudflare Workers, OpenNext, Google Kubernetes Engine (GKE), Docker, AWS (EC2/S3), Vercel, GitHub Actions CI/CD
Databases & Storage:	PostgreSQL, Neon Serverless Postgres, Supabase, MongoDB Atlas, Redis, Drizzle ORM, Prisma ORM, Cloudflare R2
Security & Compliance:	ISO/IEC 27001:2022 ISMS (SoA v1.5), SOC 2 Control Mapping, GDPR, Plaid Link, AES-256-GCM, OAuth 2.0

WORK EXPERIENCE

Software Engineer – Amex Technology — **Jul 2026 – Present | Ahmedabad, IN**

- Architected **FirmsLedger**, a programmatic directory of 10,000+ US manufacturers deployed on Cloudflare Workers (OpenNext) and Neon Postgres; reduced DB awake time from 69% to 26% and achieved 36–80ms warm edge latency.
- Developed an automated dual-model NVIDIA Nemotron AI pipeline in GitHub Actions, fact-checking and generating profiles for 9,480+ manufacturers against live websites across 780+ production commits.
- Built **GoSwiftFund**, a fintech funding marketplace with **Plaid Link** bank verification, AES-256-GCM encryption at rest, rules-based lender routing across 8 partners, instant SmartBiz API v3 pre-qualification, and a Retell AI voice agent.
- Maintained live client platforms including **CarSUVParts** (real-time US NHTSA VIN decoding) and **Custom Ink & Thread** (Next.js 16 monorepo; resolved Supabase connection bottlenecks with pooling and integrated UPS shipping APIs).

Full-Stack / Backend Engineer – SimpleTranslate — **May 2024 – Jul 2026 | Remote**

- Engineered backend architecture for **SimpleT**, an enterprise Salesforce AI translation SaaS platform utilizing Python, Django REST Framework, Celery worker queues, and MongoDB Atlas on Google Kubernetes Engine (GKE).
- Spearheaded compliance audits across all 33 backend modules for **ISO/IEC 27001:2022 ISMS**, **SOC 2 control mapping**, and **GDPR readiness**; identified and resolved top 25 priority vulnerabilities and drafted SoA v1.5.
- Integrated bidirectional sync with the **Salesforce Metadata API** (SOAP/REST) and built asynchronous XLIFF 1.2/2.0 import/export engines, expanding Salesforce component coverage from 3 to 8 types with zero-data-loss deployments.
- Hardened security posture: closed org-scoped authorization gaps, enforced object-level permissions, and encrypted client translation keys at rest using PyNaCl cryptography.

Backend Engineer – iGaming Platform — **Jan 2026 – Jun 2026 | Remote**

- Architected a modular monolith backend in NestJS and PostgreSQL to integrate **1,200+ games** across 4 third-party providers.
- Engineered high-concurrency provider APIs for session launches, real-time wallet callbacks, and transactional balance reconciliations.
- Implemented strict **transaction idempotency**, callback signature validation, and OpenAPI/Swagger documentation.

AI Engineer (Contract) – DubFlix — **Jun 2025 – Dec 2025 | Remote**

- Optimized multilingual NLP pipelines and neural speech synthesis workflows supporting automated video dubbing across 5+ languages.

FEATURED ENGINEERING PROJECTS

SimpleT (Simple Translate) *– Django, Celery, Salesforce Metadata API, GKE, ISO 27001* — **simpletranslate.io**

- Enterprise SaaS platform translating Salesforce org metadata via multi-LLM (Claude, OpenAI) and DeepL engines; features distributed Celery task queues, Redis rate-limiting, and XLIFF 1.2/2.0 bidirectional round-trip translation deployment.

FirmsLedger *– Next.js 15, Cloudflare Workers, Neon Postgres, Drizzle, NVIDIA Nemotron AI* — **firmsledger.com**

- SEO-first B2B directory indexing 10,000+ US manufacturers with dynamic filtering; automated dual-model NVIDIA AI pipeline that fact-checks company profiles against live source URLs; migrated from Vercel to Cloudflare Workers via OpenNext.

GoSwiftFund *– Next.js 16, React 19, Plaid API, AES-256-GCM, SmartBiz Partner API, Supabase* — **goswiftfund.com**

- Fintech commercial funding platform with 5-product apply flow, Plaid Link bank verification, server-side AES-256-GCM encryption, rules-based lender matching across 8 institutional partners, and Retell AI phone support agent.

EDUCATION

Bachelor of Engineering in Computer Engineering – SAL College of Engineering — **Sept 2021 – May 2025 | CGPA: 7.43 / 10**
